Equipment Certification

Equipment: WTM Casing Elevator
Model: 8-5/8" x 90°, 150-Ton
Serial No.: 7883
Hydra Inspection Report No.: 7883
Alco Machine Works Inc. W.O.: 33240
Engineering File No.: 33240-E

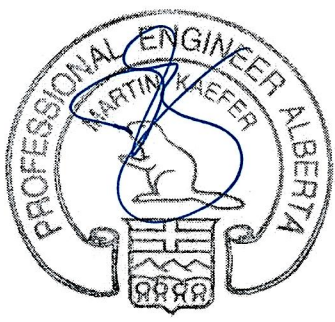

The above-mentioned elevator required a Level IV inspection (as per Canadian Association of Oilwell Drilling Contractors, R.P. 2.0), applicable repairs, and certification for service.

Hydra Group Ltd. conducted a magnetic particle (MP) inspection on September 17, 2001 after the elevator was completely disassembled and sandblasted.

Repair procedures were developed based on the MP inspection report as well as a thorough visual examination performed by qualified personnel with Alco Machine Works Inc.

Based on the final inspection on September 28, 2001 after load testing, it is our opinion that the elevator is a safe operating unit and may be returned to service within the manufacturers original rating and specification.

This certification is valid for a period of 500 operating days, as per the recommendations provided by the Canadian Association of Oilwell Drilling Contractors, or until the elevator has been damaged either as a result of operation, transportation or handling.
